Objectif
By the end of the course, a student will be able to understand introductory microeconomic theory, solve basic microeconomic problems, and use these techniques to think about a number of policy questions relevant for solving practical problems.

Descriptif
This course is an introductory undergraduate course that teaches the fundamentals of microeconomics, it provides a solid foundation for economic analysis and thinking that can last throughout a bachelor with a concentration in economics, business, political science or related fields.

The first part of this course introduces a framework for learning about consumer behavior and analyzing consumer decisions. We then turn our attention to firms and their decisions about optimal production, and the impact of different market structures on firms' behavior. The second part of the course provides an introduction to some of the more advanced topics that can be analyzed using microeconomic theory. These include the impact of uncertainty on consumer behavior, an introduction to game theory and to asymmetric information and contract theory.

Evaluation
Examen écrit.
The final exam is 2h long. The exam is composed of 30 multiple choice questions. The exam will cover the whole course and the seminars. Only one answer is true (no negative points).
